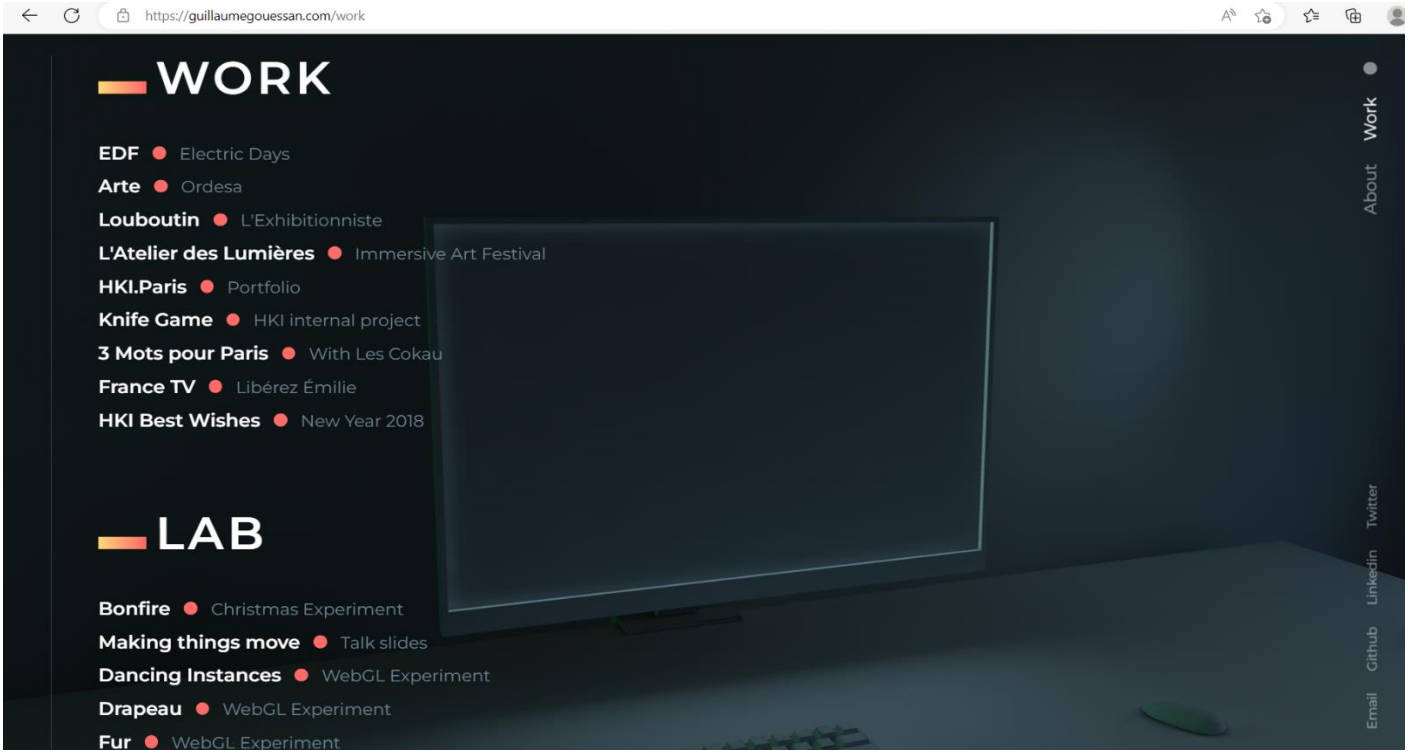
URL: [Guillaume Gouessan - Creative Developer]



This is Guillaume Gouessan's website who is a Creative Developer.

On this website at the very front page, he gave a piece of very short information which includes his name and work but the design of it is giving a glimpse of his creativity.

This website is created in a way that people can know how skilled he is in his field and what are the things he can do, but to show them he did not make his website very complicated. The best thing about this website is it is easy to navigate which is a very important factor for every website. He listed all his works in a way that others can go through his work easily without any problem.

THE FEATURE I LIKED THE MOST:

The way he made it easy for others to look through his works just by listing everything cleanly and innovatively is something that caught my eye and that is one of many amazing features that I liked the most in this website.

THE REASON I LIKED THIS FEATURE:

After I open the website the first thing, I noticed was how simple but unique this website is. He added 2 headings, one is called WORK and the other one is called LAB. Inside this heading, he listed all his works under work and all his labs under the lab section. By using this feature, he is showing what work and lab he had done before so that if someone what's to know about his work they can straightly go clicks on the thing they want to know and don't need to click 2/3 links to open the main thing. He made this website in a way that is very simple and easy to navigate for all sources of people. Because this is a website that is visible to people from different age groups and different professions and this website is easy to navigate for everyone.

But to make this website easy for everyone he didn't compromise his uniqueness and skills. He used 3D background and the way every line on that list moves just by putting the cursor over it makes this website unique and amazing. By clicking on them once people can see the full content about that topic. He showed that it is possible to use 3D elements while making an easy navigating website and that's what made this website unique.

This is what I like about this website.
