It is a business page where people can find Korean albums. It is a very colorful website with lots of amazing features to attract customers such as showing offers and deals. It has a search bar to help customers to search for their desired but there is a feature at the home page that stands out the most is an automatic slide of pictures and reviews of the products.

THE FEATURE I LIKED THE MOST:

After opening the website at the home page there is an amazing feature which is an automatic slide of pictures and reviews. In this slide, they put all the latest products and the picture of the most demanding product with a clickable button on it by clicking that people can know more about that products and order them right away besides that there is another slide in the same home page which is small slide on the bottom left side of the screen. It shows on the screen and moves automatically and shows the reviews of the customers one by one.

THE REASON I LIKED THIS FEATURE:

I do this website without deciding what to buy and this feature helped me by showing the latest and most demanding products. This is very helpful to grow a business because this colorful-looking moving slide drives people's attention towards it and the order/pre-order button helps them to click on that product and see the details and place an order.

Product reviews are very important for a business website because it helps customers to know about the product and the website more from others' perspective in this website people don't need to search for the reviews, because of the moving review slide they can see the review after opening the website's home page. That gave me clarity that the website has good products and their service is also great.

These two features are very helpful for the customers and the business too. This is the reason I like this feature.
